

Cassandra Assignment Questions (Students)

1. Create a keyspace **college**.
2. Create a **student table** to save following details

Sid int, sname varchar, age, mobile, email text, courseid int, hobbies set of strings,
project is map keys are string and value is number, skill is list of string, marks
tuple(text,int,text,int),

Primary key courseid,sid
3. Insert 5 student records.
4. Display all student records.
5. Update marks to 92 of a student with id 2 courseid.
6. Delete one student record with id 2 and courseid 101.
7. Delete email value for student with id 3 and courseid 102
8. Add 'java','.net skill for student 1 and courseid 102.
9. Remove skill python for student with id 1 and courseid 102

Create a course table to store cid int, cname text, subject is a list of strings, skills is set of strings, marks is key value pair to store { subject1:marks,subject2:marks}, marks indicates minimum passing marks for each subject

10. Insert 5 records in course table table.
11. Add new subject Aptitude in course DBDA
12. modify marks for aptitude subject to 90
13. Remove skill python from DAC course
14. Modify minimum passing marks to 45 for java

Ecommerce System

1. Create a keyspace **ecommerce** with replication factor **1**.
2. Use the keyspace **ecommerce**.

Create a table **product** with the following columns:

Column Name	Data Type
product_id	int (Primary Key)
name	text
category	text
price	double

Column Name	Data Type
stock	int
created_at	timestamp

Insert Data

Insert the following records:

product_id	name	category	price	stock
101	Laptop	Electronics	65000	10
102	Mobile	Electronics	20000	20
103	Headphones	Electronics	2000	50
104	Office Chair	Furniture	8000	15
105	Study Table	Furniture	12000	5

Questions

1. Display **all products**.
2. Display **only product name and price**.
3. Display the **product whose product_id = 103**.
4. Display **all products belonging to category Electronics**.
5. Update the **price of product_id = 102 to 18000**.
6. Update the **stock of product_id = 105 to 8**.
7. Change the **category of product_id = 104 from Furniture to Office Furniture**.
8. Delete the **entire row where product_id = 103**.
9. Delete **only the column value stock** from the row where **product_id = 101**.
10. Delete the **row where product name is Headphones**

Create Customer Table

Create a table **customer**.

Column Name	Type	Collection Type
customer_id	int	Primary Key
name	text	Normal column
phones	set<text>	SET
orders	list<int>	LIST
address	map<text,text>	MAP

Insert Data

Insert the following data:

- customer_id: 1
 - name: Priya

- phones: {9876543210, 9123456780}
 - orders: [101,102,103]
 - address: {city:Pune, state:Maharashtra}
- customer_id: 2
 - name: Amit
 - phones: {9998887776}
 - orders: [104,105]
 - address: {city:Mumbai, state:Maharashtra}
- customer_id: 3
 - name: Neha
 - phones: {8887776665,7776665554}
 - orders: [101]
 - address: {city:Delhi, state:Delhi}

11. Display all customers.

12. Display **only phone numbers of customer_id = 1**.

13. Display **orders list of customer_id = 2**.

14. Display **city from address map for customer_id = 1**.

15. Add a new phone number **9999999999** to the **phones SET** for customer_id = 1.

16. Add a new order **106** to the **orders LIST** for customer_id = 2.

17. Update the **city in address MAP** for customer_id = 3 to **Bangalore**.

18. Remove phone number **9123456780** from **phones SET** of customer_id = 1.

19. Remove order **103** from **orders LIST** of customer_id = 1.

20. Remove **state key from address MAP** of customer_id = 2.

Create a **User Defined Type** called **payment_info**

Field	Type
method	text
status	text

Create table **orders**

Column	Type
order_id	int (Primary Key)
product_name	text
amount	double
payment_details	frozen<payment_info>

Insert Data

Insert the following records:

order_id	product_name	amount	payment
1	Laptop	65000	method:Credit Card, status:Paid
2	Mobile	20000	method:UPI, status:Paid
3	Chair	8000	method:Cash, status:Pending

21. Display all orders.
22. Display **payment method of order_id = 1**.
23. Update **payment status of order_id = 3 to Paid**.
24. Delete the order where **order_id = 2**.
